

Rating Action: Moody's assigns definitive Baa1 rating to Series 12 of DeltaCredit Bank mortgage covered bonds

Global Credit Research - 05 Sep 2013

London, 05 September 2013 -- Moody's Investors Service has assigned a definitive Baa1 long-term rating to the RUB5.0 billion Series 12-IP mortgage covered bonds issued by DeltaCredit Bank (DeltaCredit or the issuer; Baa3 negative, D/ba2 negative). This issuance is in accordance with the Federal law No. 152-FZ "On Mortgage Backed Securities", dated 11 November 2003 (the Mortgage Securities Act).

RATINGS RATIONALE

A covered bond benefits from (1) the issuer's obligation to pay interest and principal on the bonds; and (2) if the issuer defaults, the economic benefit of a collateral pool (the cover pool). The ratings therefore take into account the following factors:

- (1) The credit strength of DeltaCredit Bank (Baa3, long-term global local-currency (GLC) rating; BFSR D/BCA ba2, outlooks negative).
- (2) The value of the cover pool in the event of issuer default. The stressed level of losses modelled in event of issuer default (cover pool losses) for this transaction is 37.5%.

The analysis of the value of the cover pool considered:

- a) The credit quality of the assets backing the covered bonds. The mortgage covered bonds are backed by Russian residential mortgage loans and the collateral score for the cover pool is 16.7%.
- b) The Mortgage Securities Act, which provides protection for bondholders, such as:
 - (i) The ring-fencing of cover pool assets. These assets do not form part of the issuer's bankruptcy estate.
 - (ii) The amount of eligible cover pool assets must not fall below the amount of outstanding covered bonds.
 - (iii) Any issuance of covered bonds by a bank must be registered with the Central Bank of Russia (CBR).
 - (iv) An independent party, the Special Depository, monitors the cover pool on an on-going basis. The Special Depository is licensed by and reports to the Central Bank of Russia (CBR).
- c) The exposure to market risk. The market risk for the cover pool is 26.3%
- d) The committed over-collateralisation in the cover pool is 0%. The minimum OC level that is consistent with the Baa1 rating target is 0%. These numbers show that Moody's is not relying on "uncommitted" OC in its expected loss analysis.

The TPI assigned to this transaction is "Very Improbable". With covered bonds accelerating by law upon issuer insolvency, the Mortgage Securities Act offers limited support for timely payment to covered bondholders after issuer default. There is no mitigation to refinancing risk for covered bondholders.

This TPI constrains the rating of the covered bonds at A3, with the current foreign currency ceiling for Russian transactions being A2, and the current local currency ceiling being A1.

As is the case with other covered bonds, we consider the transaction to be linked to DeltaCredit's credit strength, particularly from a timeliness of payment perspective. If this credit strength deteriorates -- all other variables being equal -- the covered bond ratings may come under pressure.

As of the cut-off date (25 March 2013), the total value of the assets included in the cover pool, comprising 2,364 residential mortgage loans, is approximately RUR 5.1 billion. The residential mortgage loans have a weighted-average seasoning of 15 months and a weighted-average loan-to-value (LTV) ratio of 57.1%.

The definitive rating assigned by Moody's addresses the expected loss posed to investors. Moody's ratings address only the credit risks associated with the transaction. Other non-credit risks have not been addressed, but may have a significant effect on yield to investors.

KEY RATING ASSUMPTIONS/FACTORS

Covered bond ratings are determined after applying a two-step process: an expected loss analysis and a TPI framework analysis.

EXPECTED LOSS: Moody's determines a rating based on the expected loss on the bond. The primary model used is Moody's Covered Bond Model (COBOL), which determines expected loss as (1) a function of the issuer's probability of default (measured by the issuer's rating); and (2) the stressed losses on the cover pool assets following issuer default.

The cover pool losses for DeltaCredit Bank's Series 12-IP mortgage covered bonds are 37.5%. This is an estimate of the losses Moody's currently models if DeltaCredit Bank defaults. Cover pool losses can be split between market risk of 26.3% and collateral risk of 11.2%. Market risk measures losses as a result of refinancing risk and risks related to interest-rate and currency mismatches (these losses may also include certain legal risks). Collateral risk measures losses resulting directly from the credit quality of the assets in the cover pool. Collateral risk is derived from the collateral score, which for this programme is currently 16.7%.

The committed over-collateralisation in the cover pool is 0%. The minimum over-collateralisation level that is consistent with the (P)Baa1 rating target is 0%. Therefore, Moody's is not relying on "uncommitted" over-collateralisation in its expected loss analysis.

All numbers in this section are based on Moody's most recent modelling (based on data as 25 March 2013).

The cover pool losses are an estimate of the losses Moody's currently models if the relevant issuer defaults. Cover pool losses can be split between market risk and collateral risk. Market risk measures losses as a result of refinancing risk and risks related to interest-rate and currency mismatches (these losses may also include certain legal risks). Collateral risk measures losses resulting directly from the credit quality of the assets in the cover pool. Collateral risk is derived from the collateral score.

TPI FRAMEWORK: Moody's assigns a "timely payment indicator" (TPI), which indicates the likelihood that timely payment will be made to covered bondholders following issuer default. The effect of the TPI framework is to limit the covered bond rating to a certain number of notches above the issuer's rating.

Moody's has assigned a TPI of Very Improbable to DeltaCredit's Series 12-IP mortgage covered bonds.

SENSITIVITY ANALYSIS

The robustness of a covered bond rating largely depends on the issuer's credit strength.

The TPI Leeway measures the number of notches by which the issuer's rating may be downgraded before the covered bonds are downgraded under the TPI framework.

Based on the current TPI of Very Improbable the TPI Leeway for this programme is limited, meaning the covered bonds might be downgraded as a result of a TPI cap once the issuer rating is downgraded below Baa3, all other variables being equal.

A multiple-notch downgrade of the covered bonds might occur in certain limited circumstances, such as (1) a sovereign downgrade negatively affecting both the issuer's senior unsecured rating and the TPI; (2) a multiple-notch downgrade of the issuer; or (3) a material reduction of the value of the cover pool.

RATING METHODOLOGY

The principal methodology used in this rating was "Moody's Approach to Rating Covered Bonds" published in July 2012. Please see the Credit Policy page on www.moody.com for a copy of this methodology.

REGULATORY DISCLOSURES

For ratings issued on a program, series or category/class of debt, this announcement provides certain regulatory disclosures in relation to each rating of a subsequently issued bond or note of the same series or category/class of debt or pursuant to a program for which the ratings are derived exclusively from existing ratings in accordance

with Moody's rating practices. For ratings issued on a support provider, this announcement provides certain regulatory disclosures in relation to the rating action on the support provider and in relation to each particular rating action for securities that derive their credit ratings from the support provider's credit rating. For provisional ratings, this announcement provides certain regulatory disclosures in relation to the provisional rating assigned, and in relation to a definitive rating that may be assigned subsequent to the final issuance of the debt, in each case where the transaction structure and terms have not changed prior to the assignment of the definitive rating in a manner that would have affected the rating. For further information please see the ratings tab on the issuer/entity page for the respective issuer on www.moodys.com.

For any affected securities or rated entities receiving direct credit support from the primary entity(ies) of this rating action, and whose ratings may change as a result of this rating action, the associated regulatory disclosures will be those of the guarantor entity. Exceptions to this approach exist for the following disclosures, if applicable to jurisdiction: Ancillary Services, Disclosure to rated entity, Disclosure from rated entity.

Regulatory disclosures contained in this press release apply to the credit rating and, if applicable, the related rating outlook or rating review.

Please see www.moodys.com for any updates on changes to the lead rating analyst and to the Moody's legal entity that has issued the rating.

Please see the ratings tab on the issuer/entity page on www.moodys.com for additional regulatory disclosures for each credit rating.
